

Part 3 – Chromosome coverage density [BRCA]

Normalised by chromosome length and n samples per cell

Chromosome coverage density by class × clock rank

Colour = $\text{sum}(\text{seg length}) / \text{chr length} / \text{n_samples}$ | Stars = Wilcoxon vs row median (BH)

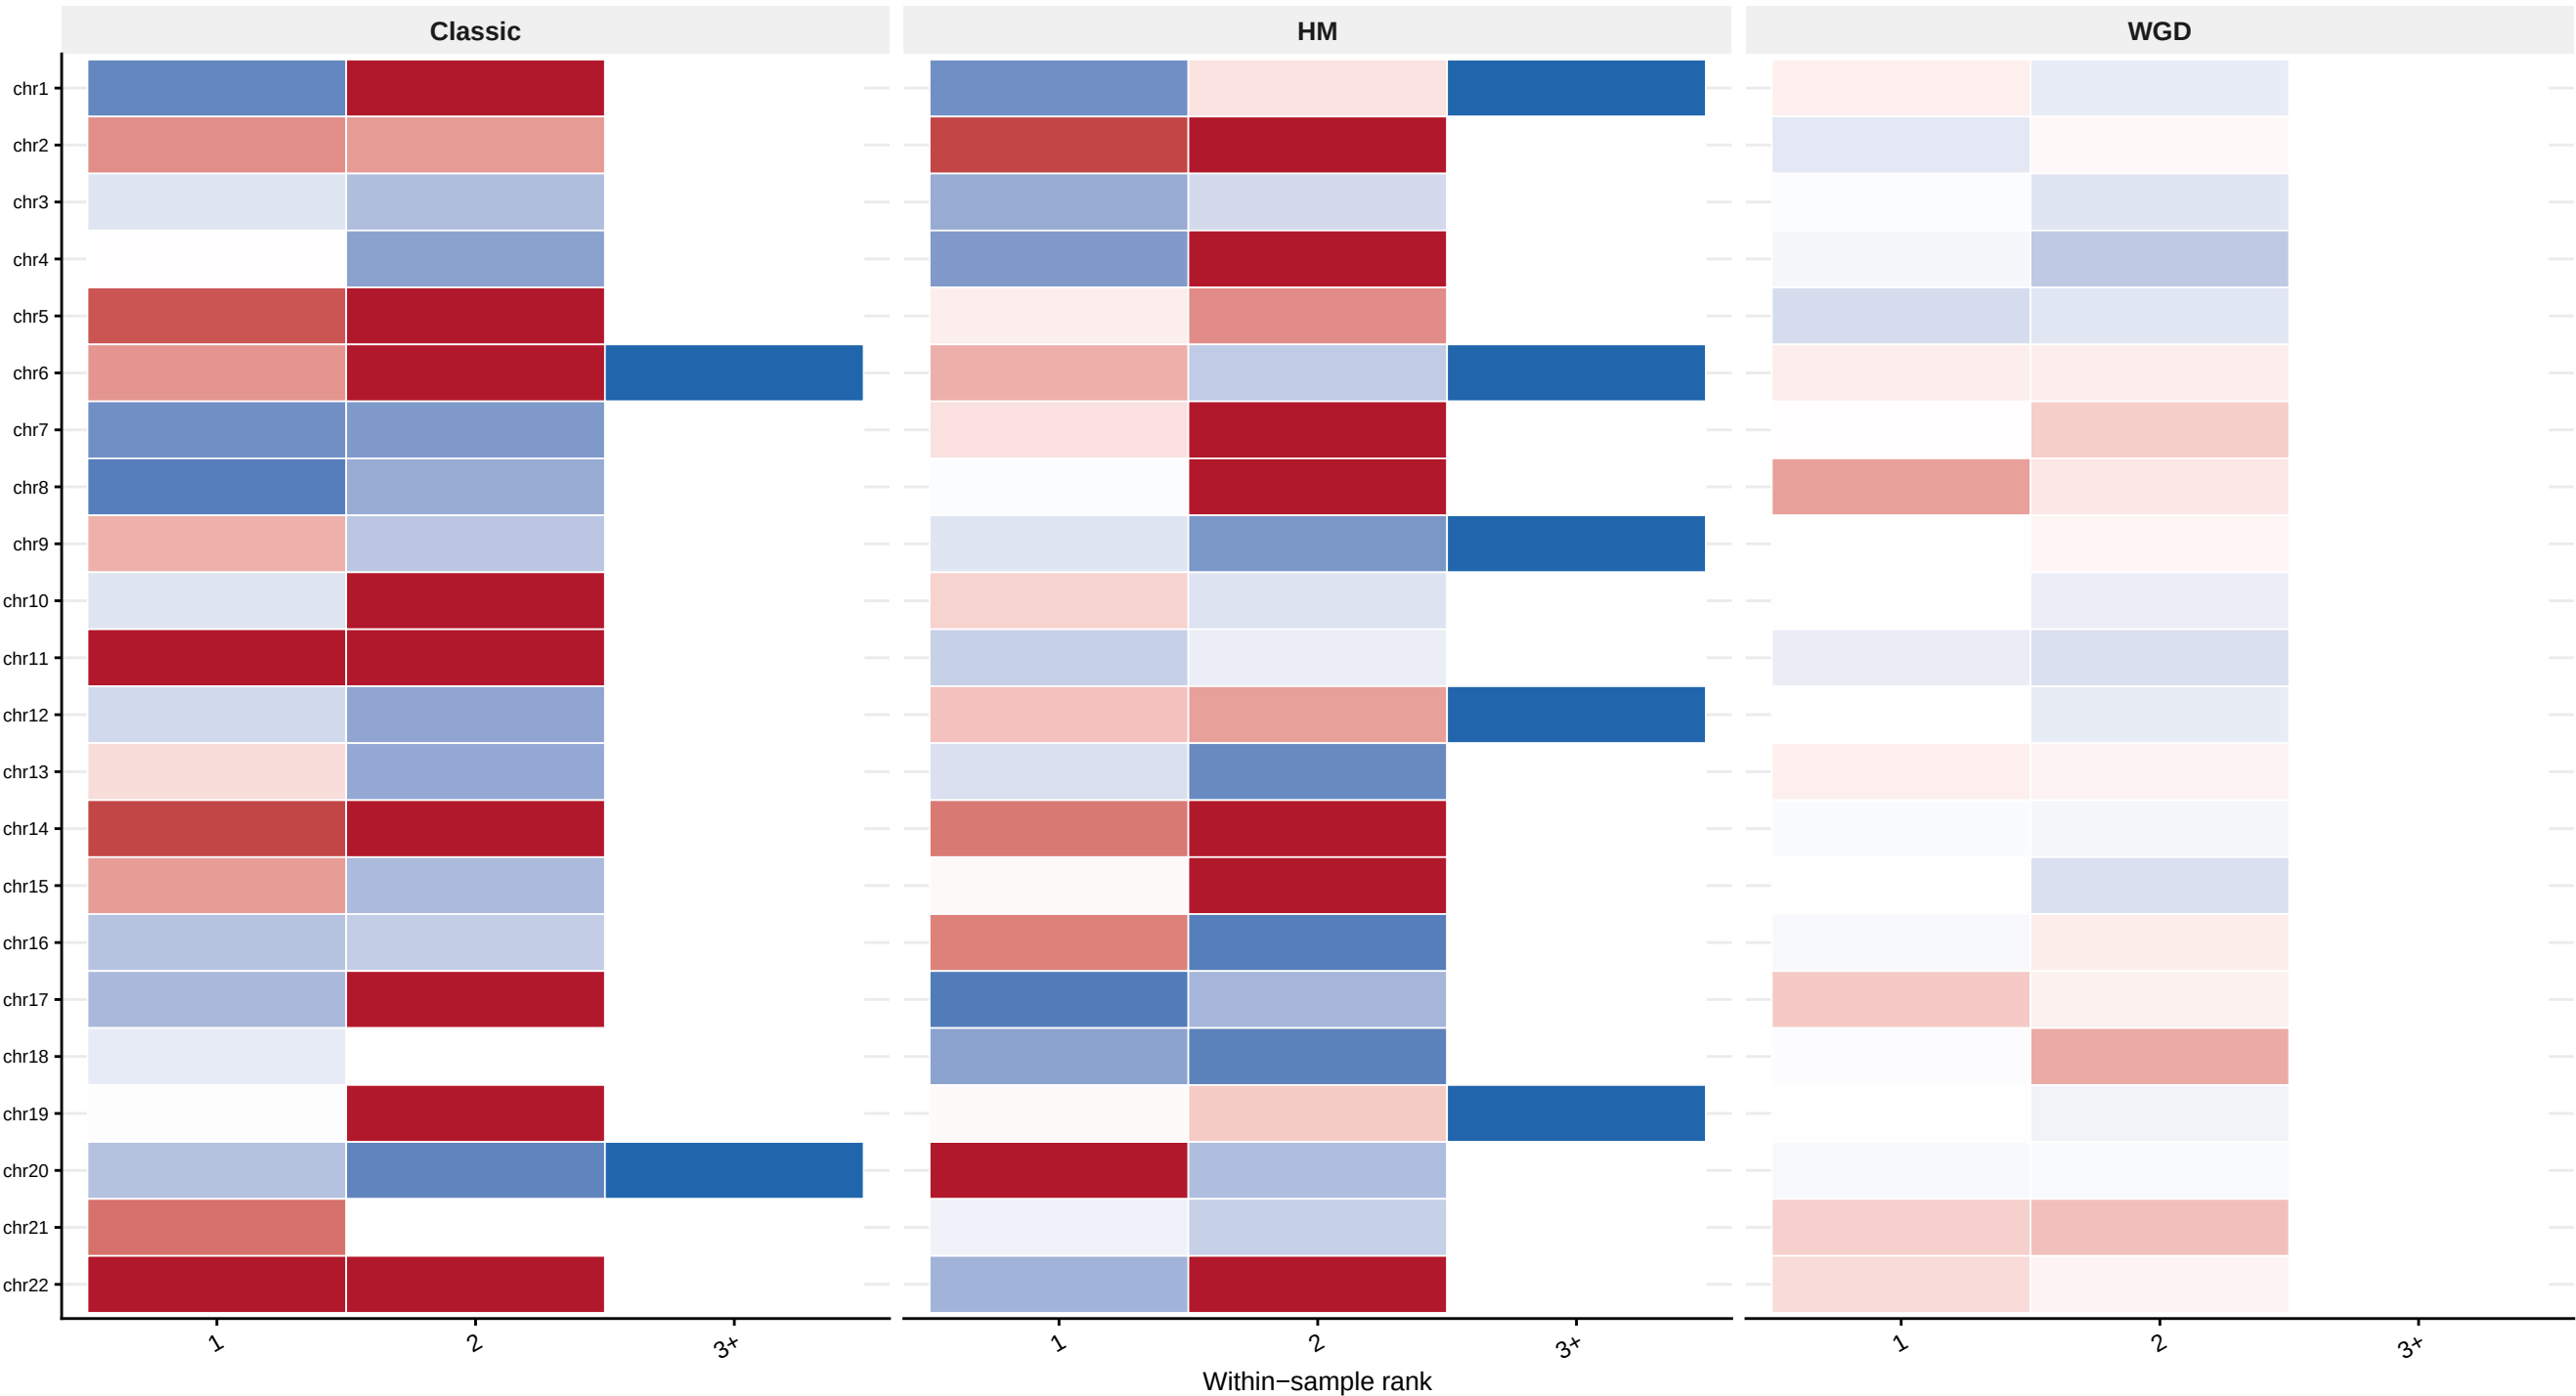

Mean coverage density / sample

0.0% 10.0% 20.0% 30.0% 40.0% 50.0%

Relative coverage density (log2 ratio vs row median)

Red = depleted | Blue = enriched relative to class × rank median

log2(density / row median)

-3 -2 -1 0 1 2 3
