

Part 3 – Chromosome coverage density (normalised by chr length and n samples)

Within-sample rank: Rank 1 = earliest CNA | Rank 2 = second | Rank 3+ = third or later

Chromosome coverage density by class × within-sample rank
Colour = $\text{sum(seg length)} / \text{chr length} / \text{n_samples}$ | Stars = Wilcoxon vs row median (BH-corrected): * p<0.05, ** p<0.01, *** p<0.001

Relative coverage density (log2 ratio vs row median)

Red = depleted, Blue = enriched relative to that class × rank median
